MEASURING COLOUR, 4TH EDITION

Robert W. G. Hunt & M. R. Pointer

published November 2011; 496 pages; ISBN 978-1-119-97537-3

Building upon the success of earlier editions, the book has been updated throughout, with new chapters on colour rendering by light sources; colorimetry with digital cameras; factors affecting the appearance of coloured objects, and details of new CIE colour appearance models. The addition of the co-author, Mike Pointer, has facilitated the inclusion of extensive practical advice on measurement procedures and the latest CIE recommendations.

Key features:

- Covers the principles of colour measurement.
- Provides the reader with the basic facts needed to measure colour.
- Describes and explains the interactions between how colour is affected by the type of lighting, by the nature of the objects illuminated, and by the properties of the colour vision of observers. Also presents the physiology and psychology of the human observer.
- Includes many examples; a series of Appendices provides the numerical data needed in many colorimetric calculations.

(List Price: \$110; Amazon price \$97 on 9/21/11)
