Editorial Profile: JIST provides the imaging community documentation of a broad range of research, development, and applications in imaging. The selection of papers reflects the role of IS&T as the “window on imaging”, promoting communication and understanding across the boundaries of the many disciplines involved in modern imaging. Typical issues include research papers and comprehensive reviews on a variety of topics within the imaging field. Topics include: chemistry of photosensitive materials, physics and chemistry of silver halides, digital printing technologies, photographic emulsions, chemical and spectral sensitization, prepress and printing technologies, remote sensing, color imaging, coating technologies, photopolymers, materials for electrophotography, photoconductors, latent image formation, holography, image analysis and interpretation, image permanence.

Advertisers Note: Rate cards and sample issues of JIST are available upon request. Please make space reservation at your earliest convenience. Please contact me if you have questions or would like to reserve space.
