Editorial Profile: JIST provides the imaging community documentation of a broad range of research, development, and applications in imaging, functional printing and fabrication. The selection of papers reflects the role of IS&T as the “window on imaging”, promoting communication and understanding across the boundaries of the many disciplines involved in modern imaging. Typical issues include research papers and comprehensive reviews on a variety of topics within the imaging field. Topics include: digital printing and imaging technologies, color imaging, image analysis and interpretation, image permanence, remote sensing, holography, prepress and printing technologies, functional printing and digital fabrication, coating technologies, photographic emulsions, chemical and spectral sensitization, photopolymers, materials for digital printing and imaging, photoconductors, latent image formation, chemistry of photosensitive materials, and physics and chemistry of silver halides.

Advertisers Note: Rate cards and sample issues of JIST are available upon request. Please make space reservation at your earliest convenience. Please contact us if you have questions or would like to reserve space.
