## **Abstract**

"Digital camera technology has created a lot of interest from many industries. There will be fundamental features that will be "must haves" in the cameras over the coming months. One of these features is removable media. But there are several options that have been introduced that promise to

bring all of the benefits for all users. Find out the real story behind the various competing solutions from disk drive options to solid state flash memory options. Items that will be examined are pictures per second vs flash memory write speeds, resolution vs capacity requirements, technology roadmaps, power considerations.
