Reprint Calculation: Example

To figure the cost of your reprint, take the number of pages of your article + 1 (for the cover). A six page article, for example, would be a 7-page reprint, figured at the cost of up to 8 pages. Please note that covers will be printed in grayscale unless color is paid for.

For 100 reprints of the 7-page paper, the cost is \$225.

For every color page, add the number of color pages x number of reprints x \$1.25. If the 7-page reprint has 3 color pages, the cost is $\$225 + (3 \times 100 \times 1.25) = \$225 + \$375 = \600 .

REPRINT ORDERS MUST BE PREPAID
