SPECIAL ISSUE: CALL FOR PAPERS

Multisensory and Crossmodal Interactions

GUEST EDITORS
Lora Likova, Brain Plasticity, Learning, and Neuroplasticity Laboratory, Smith-Kettlewell Eye Research Institute
Fang Jiang, Department of Psychology, University of Nevada, Reno
Noelle R. B. Stiles, Department of Ophthalmology, USC
Arm and R. Tanguay, Jr., Depts. of Electrical Engineering, Biomedical Engineering, and Ophthalmology, USC

This Special Issue aims to highlight contemporary research on multisensory and crossmodal interactions, and to advance our current understanding of scientific methods, findings, and theoretical ideas in these fields. We invite contributions of both empirical research studies and review articles that feature basic multisensory or crossmodal science, such as behavioral, brain imaging, and neuroplasticity investigations, as well as multisensory research that is inspired by or advances technological innovation in areas such as optical and MRI imaging, multimedia, and virtual and augmented reality.

All submissions to the Special Issue will undergo full peer review, maintaining the high editorial standards for regular submissions to the Journal of Perceptual Imaging, IS&T’s new open-access* journal that sits at the intersection of perception and imaging. Each manuscript is published upon acceptance, without waiting for the rest of the manuscripts in the Special Issue to complete the peer review process.

SUBMISSION DEADLINE: December 1, 2020

Manuscripts should include a cover letter indicating that the submission is for the Special Issue on Multisensory and Crossmodal Interactions, and select “Special Issue Manuscript” when submitting the paper.
