Abstract

Many companies are updating their transactional production printing systems from legacy printers to modern cut-sheet printers. This transition is primarily driven by maintenance cost, operational requirements and competitive market pressures. When a company makes this upgrade they are faced with the issue of how to modernize their mission critical printing workflows without jeopardizing their business operation. This paper describes a tool that has been developed assist with the challenges an organization faces moving from proprietary legacy printing to a modern, open system approach.

Biography
